through a linker to a solid phase, forming a complex of (A)-solid phase.

through a linker to a solid phase, forming a complex of (A)-solid phase.

Where (A) comprises 10-50 amino acids capable of forming a secondary structure in a benign buffer after liberation from the solid phase, and further the (A)-solid phase complex comprises an immunogenic substance and/or an immune mediator coupled on (A). The present sequence cepresents a specifically claimed r-cell stimulatory peptide from the present invention. An (A)-solid phase complex can be used as a scaffold for the production of chemical derivatives, characterised by covalently attaching molecules at attachment points. Alternatively (A) is used as a scaffold-peptide for the incorporation into an Immunostimulating complex (Iscom) resulting an (A)-iscom complex which is used for the complex (Iscom) resulting an (A)-iscom complex which is used for the conjugation. (A) derivatised with one or more peptides having fibronectin. aminin- or vitronectin-like binding activities can be used for the promotion of cell-attachment to plastic surfaces, in of specifically-binding aptamers or as a diagnostic agent. Such of specifically-binding aptamers or as a diagnostic agent. Such or indicative of pregnancy or of a disease, such as an infectious, cutoimmune or cancerous disease.

(Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       XXXXIIXXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibodies against gonadotropin releasing hormone (GRRH also known as luteinising hormone releasing hormone. LHRH) comprising a fusion peptide which comprises a promiseuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic limmunomimic peptide apitope or its analogue. The synthetic limmunomimic peptide and immune response against GRRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other synthetic cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GRRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a synthetic immunogen for inducing specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Frizzled; Fzd-2; receptor; human; head and neck squamous carcinoma; cancer; diagnosis; immunotherapy; gene therapy; cytostatic;

The present sequence is that of a fusion protein in which the measles virus MVF helper T cell epitope is joined via a linker peptide to a putative B cell epitope of human fizzled Fzd-2. In an example from the invention, DNA encoding the construct was inserted into a plasmid vector, and mice were injected with plasmid DNA and then boosted with peptide or recombinant protein. The B-cell epitope may need to be redesigned to eliminate cross-reactivity in the humoral response to other fizzled isoforms. The invention is based on the finding that most head and neck squamous carcinoma cell lines (HNSCC) overexpress one or more wingless (Wnt) or frizzled (Fzd) mRNAs, making the Wnt and Fzd receptors useful targets for immunotherapy of this common cancer. The invention of mines claimed methods for determining, by RT-PCR, overexpression of a Wnt or Fzd grotein in a cancer, and for altering the growth of a cell overexpressing a Wnt and/or Fzd protein in a cancer, and for altering the contacting the cell with an antibody against the protein, or with a synthetic peptide, recombinant protein or DNA vector comprising a non-homologous region of wnt and/or Fzd proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Determining overexpression of wnt or frizzled gene in a tumor cell useful for immunotherapy in head and neck squamous cell carcinoma comprises reverse transcription PCR with primers directed against the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   T-cell stimulatory peptide from measles virus F-protein 286-302.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match 46.0%; Score 80; DB 24; Length 75; Best Local Similarity 89.5%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                     antibodies against gonedoriopin releasing hormone (GnRH aiso known as luteinising hormone releasing hormone. LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunoominic peptide epitope or its analogue. The synthetic immunoomin is useful inducing an immuno response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic phypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

The invention relates to a synthetic immunogen for inducing specific antibodies against gonadorropin releasing hormone (GnRH also known as luteinising hormone releasing hormone (LRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope immunominic peptide epitope or its analogue. The synthetic immunomen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other synthetic phyparecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gonadotrophin releasing hormone; GnRH; synthetic immunogen;
luteinising hormone releasing hormone; LHRH; contraceptive;
promiscuous helper T-cell peptide epitope; immunomimic peptide epitope;
breast cancer; uterine cancer; gynaecological cancer; endometriosis;
uterine fibroid; benign prostatic hypertrophy; prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                               ö
                                               The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known sat luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic phypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                      Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known so luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known set luteinising hormone releasing hormone. LiRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other synaecological cancer), endometriosis, uterine fibroids, benign prostatic phypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GRRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to the manufacture of a synthetic chimeric peptide comprising a non-typable Haemophilus influenzae fimbrin peptide fused via a linker peptide to a T-cell epitope peptide. The chimeric peptide is used in immunogenic compositions which induce an immune response against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            non-typable Haemophilus influenzae. This sequence represents an example of a chimeric fimbrin/T-cell epitope peptide and is designated LB2. The peptide comprises a 18 amino acid sequence corresponding to amino acids 163-180 of the fimbrin protein, the linker sequence and amino acids 188-302 of the measles virus fusion protein (a T-cell epitope).
                             peptide linker to the measles virus MVFT helper epitope. In an example from the invention, DNA encoding the construct was inserted into a plasmid vector, and mice were injected with plasmid DNA and then boosted with peptide or recombinant protein. The B-cell then boosted with peptide or recombinant protein. The B-cell ceptope may need to be redesigned to eliminate cross-reactivity in the humoral response to other firizaled isoforms. The invention is based on the finding that most head and neck squamous carcinoma cell lines (HNSCC) overexpress one or more wingless (Mnt) or firizaled (Fzd) mRNAs, making the Wnt and Fzd receptors useful targets for immunotherapy of this common cancer. The invention of a Wnt or Fzd gene in a tumour cell, for detecting overexpression of a Wnt or Fzd gene in a tumour cell, for detecting overexpression of a Wnt or Fzd gene in a tumour cell, for detecting overexpression of a Wnt and/or Fzd protein in a cancer, and for altering the contacting the cell verexpressing a Wnt and/or Fzd protein by contacting the cell with an antibody against the protein, or with a synthetic peptide, recombinant protein or DNA vector comprising a non-homologous region of Wnt and/or Fzd proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chimeric; non-typable Haemophilus influenzae; fimbrin; T-cell epitope;

The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic

peptides (UBI(f) peptides) of P5-like fimbrin proteins from various peptides (UBI(f) peptides) of P5-like fimbrin proteins from various haemophilus influenzae strains. The peptides are used for diagnosis, prevention, and treatment of Haemophilus influenzae infections, such infection. The peptides may also be used in vaccines against infection. The peptides and probes from the present invention can be used for diagnosis of H. influenzae infection. AAY19955 to AAY1993, and AA291201 to AA291252, represent sequences used in the exemplification of
                       The present invention describes antigenic P5-like fimbrin subunit

                                                                                                                                                                                                                                                                                                                              ó
                                                                                                                                                                                                    comprising a non-typable Haemophilus influenzae fimbrin peptide fused via a linker peptide to a T-cell epitope peptide. The chimeric peptide is used in immunogenic compositions which induce an immune response against non-typable Haemophilus influenzae. This sequence represents an example of a chimeric fimbrin/T-cell epitope peptide and is designated LB1. The peptide comprises a 19 amino acid sequence corresponding to amino acids 117-135 of the fimbrin protein, the linker sequence and amino acid 288-302 of the measles virus fusion protein (a T-cell epitope).
                                                                                                                                                                                         The invention relates to the manufacture of a synthetic chimeric peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Vaccine; non-typeable Haemophilus influenzae; ntHi; infection; chimeric protein; Hemophilus influenzae; PS-like fimbrin protein; lipoprotein D; LB1(f); immunogenic; antigenic; otitis media; sinusitis; conjunctivitis; lower respiratory tract infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                       antibodies against gonadotropin releasing hormone (GREH also known as luteinising normone releasing hormone (GREH also known peptide which comprises a promiscuous helper T-cell peptide epitope and immunominist peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GREH in an animal subject, and as such is useful as contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GREH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gonadotrophin releasing hormone; GRRH; synthetic immunogen;

antibodies against gondorropin releasing hormone (GRRH also known as lutein. Single hormone releasing hormone. LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic high and specific anti-GRRH antibody titres. The immunogen is effective in eliciting is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chimeric; non-typable Haemophilus influenzae; fimbrin; T-cell epitope;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

US-08-488-351A-19
Sequence 19, Application US/08488351A
Sequence 19, Application US/08488351A
GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Mang, Chang Yi
APPLICANT: Mang, Chang Yi
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
CORRESPONDENCE ADDRESS:
ADDRESSEE: Maria C.H. Lin
STREET: New York
CITY: New York

Patent No. US200200056416A1

GENERAL INFORMATION:

APPLICANT: Aphton Corporation

TITLE OF INVENTION: Chimeric Peptide Immunogens

FILE REPERENCE: 1102865-0047

CURRENT PILING DATE: 2001-05-04

PRIOR FILING DATE: 2000-05-05

NOWBER OF SED ID NOSS: 20

SOFTWARE: PatentIn version 3.0

SED ID NO 13

LENGTH: 34

TYPE: PRT

TYPE: PRT

OTHER INFORMATION: Chimeric peptide consisting of amino acid sequence 1-10 of The OTHER INFORMATION: Chimeric peptide consisting of amino acid sequence 1-10 of The NAME/KEY: PEPTIDE

COATION: (1) ...(10)

OTHER INFORMATION: Amino acid sequence 1-10 of the human GRRH hormone

NAME/KEY: PEPTIDE

COATION: (1) ...(18)

OTHER INFORMATION: Amino acid sequence 288-302 of the Measles
